Flask Application Development:

Retail Order Management Platform:

The screenshot shows the main dashboard of the Retail Order Management Platform. It features an orange header with the title and a subtitle. Below the header, there are three API status cards: Health Check API (Service Healthy), Order Status API (Order Processing), and Inventory API (Inventory Available). A table titled 'Available API Endpoints' lists the endpoints, their descriptions, and their status.

API Endpoint	Description	Status
/health	Order Service Health Check	Active
/order-status	Order Processing Validation	Active
/inventory	Inventory Availability Validation	Active

Order Service Health Check:

The screenshot shows the result of the Order Service Health Check endpoint. It displays a green 'Healthy' status with a message indicating that retail order services are running successfully.
